

Reference letter

In September 2013, in cooperation with UIBS Teamwork, we launched an innovative production management system, IPOsystem in the mechanical department of our company. This is a good time to emphasize the positive changes that have already taken place in our company. Our experience so far allows us to calmly look at the next stage of implementation in the assembly department.

The activity of our company is very seasonal. The key to our success is flexibility, experience, openness and recognition of our clients' needs. In order to meet the growing market demands, we needed a tool that would allow us to provide precise answers to questions about production possibilities and deadlines. From the many programs offered to us, we chose IPOsystem because it best suited our specific activity (diversity and individuality of customer orders).

Today, thanks to specialists from UIBS and the System implemented by them, we have significantly improved internal communication and significantly improved the work of designers and technologists. The introduced IPOsystem visibly improved the enterprise management system after the first functionalities were launched.

The knowledge and experience in the implementation of production management systems by consultants working with us turned out to be an additional advantage. Their commitment and responsible approach to the implementation process facilitates the understanding of the introduced tools among their users. Our experience shows that it is a fully credible and reliable partner that responds to emerging needs on an ongoing basis.

In the near future, we expect further effects of the system's work - improvement of the timeliness of contracts, optimization of employment and increased production efficiency.
